20 One-Liners to Remember

Quick-fire facts for last-minute revision.

- 1 MSME stands for Micro, Small and Medium Enterprises, covering both manufacturing units and service providers in India.**

The term unifies three enterprise sizes classified together under a single regulatory framework in India.

- 2 The MSME sector in India is governed primarily by the MSMED Act, 2006.**

This Act created the legal framework for classifying and supporting micro, small and medium enterprises.

- 3 The MSMED Act, 2006 formally brought the services sector under the MSME definition for the first time.**

Before this Act, MSME classification focused mainly on manufacturing units.

- 4 The Ministry of Micro, Small & Medium Enterprises frames national policy and schemes for the MSME sector.**

It is the nodal central government body responsible for MSME growth and support.

-
- 5 Under the original MSMED Act, manufacturing MSMEs were classified using investment in plant and machinery.**

This was the sole yardstick for manufacturing units before the revised composite criterion.

-
- 6 Under the original MSMED Act, service sector MSMEs were classified using investment in equipment.**

Services used a separate investment yardstick from manufacturing under the old law.

-
- 7 The revised MSME classification uses a composite criterion combining investment and turnover.**

This composite approach replaced the earlier investment-only method for classifying enterprises.

-
- 8 The revised MSME definition applies the same investment-and-turnover limits to both manufacturing and service enterprises.**

This removed the earlier gap where manufacturing and services had separate classification criteria.

-
- 9 MSMEs are widely regarded as an engine of economic growth and a vehicle for equitable development.**

This phrase is a favourite in exam answers linking MSMEs to employment and exports.

-
- 10 MSMEs account for a large majority of India's total industrial enterprises.**

Their sheer numbers make them central to India's industrial employment and output base.

-
- 11 India's MSME sector produces thousands of value-added products across manufacturing and services.**

This range highlights the sector's diversity beyond any single industry.

-
- 12 MSMEs generally have higher labour intensity than large enterprises, giving them strong employment potential.**

This labour intensity is a key reason banks and policymakers prioritise MSME lending.

-
- 13 Low credit penetration in the MSME sector is largely due to insufficient credit information on borrowers.**

Limited data on small enterprises makes it harder for lenders to assess creditworthiness.

-
- 14 SMERA, the SME Rating Agency of India, was set up to improve credit assessment of small enterprises.**

A better rating helps small firms access bank finance more easily.

-
- 15 SMERA was launched in 2005 and promoted by SIDBI along with Dun & Bradstreet, CIBIL and leading banks.**

This multi-institutional backing gave the rating agency credibility with lenders.

- 16 An MSME cluster is a local agglomeration of enterprises producing related or complementary products.**

Clustering lets small units share infrastructure and compete more effectively.

- 17 A localised leather industry cluster can include tanning units, finishing units and garment makers.**

This is a classic textbook example of how MSME clusters integrate a supply chain locally.

- 18 Common structural problems facing MSMEs include technological obsolescence and outdated machinery.**

Ageing technology limits productivity and competitiveness for many small units.

- 19 Persistent fund shortages and credit gaps are recurring structural challenges for MSMEs.**

Access to adequate, timely finance remains one of the sector's biggest constraints.

- 20 Under the old MSMED Act, investment in plant and machinery excluded the cost of land and building.**

Only machinery-related original cost counted, keeping the classification focused on production assets.
