20 One-Liners to Remember

Quick-fire facts for last-minute revision.

- 1 The RBI Monetary Policy Framework manages interest rates, liquidity and money supply to control inflation while supporting growth.**
It gives the RBI a structured, rules-based approach to balancing price stability with economic growth.
- 2 The RBI monetary policy framework was formally adopted via an amendment to the Reserve Bank of India Act, 1934.**
That amendment gave statutory backing to flexible inflation targeting in India.
- 3 India follows a flexible inflation targeting (FIT) regime for monetary policy.**
Under FIT, the RBI targets a numerical inflation rate rather than relying purely on discretion.
- 4 The Government of India sets the numerical inflation target in consultation with the RBI.**
Joint target-setting is a core feature of India's flexible inflation targeting framework.
- 5 The current inflation target under the framework is 4% CPI inflation.**
The 4% Consumer Price Index target anchors the RBI's monetary policy decisions.

20 One-Liners | RBI Monetary Policy Framework and the Role of the MPC Explained

JAIB - Revision - RBI Monetary Policy Framework and the Role of the MPC Explained

6 The RBI's inflation target carries a tolerance band of plus or minus 2%.

This band gives the RBI a comfort zone of 2% to 6% CPI inflation.

7 The RBI's inflation comfort zone runs from 2% to 6% CPI inflation.

The 4% target plus the 2% tolerance band together define this range.

8 The monetary policy framework rests on three pillars: an inflation objective, the MPC, and transparent communication.

These three elements distinguish rules-based inflation targeting from earlier discretionary policy.

9 If average inflation breaches the tolerance band for three consecutive quarters, the RBI must report to the government.

This accountability clause requires the RBI to explain reasons and propose corrective steps.

10 The Monetary Policy Committee (MPC) is the six-member body that decides India's policy repo rate.

The MPC sits at the centre of the RBI's inflation targeting framework.

11 The MPC comprises three RBI members and three external members.

The RBI side includes the Governor, a Deputy Governor, and one central board nominee.

12 The RBI Governor chairs the MPC and holds a casting vote in the event of a tie.

MPC decisions are otherwise taken by simple majority, with each member getting one vote.

13 External MPC members are appointed by the Government of India for a four-year term.

Fixed terms for external members are meant to keep them independent of short-term political pressure.

14 The MPC must meet at least four times in a financial year.

In practice, the MPC meets roughly every two months to review the policy stance.

15 MPC meeting minutes, including how each member voted, are published within fourteen days.

This transparency requirement helps anchor market expectations about future policy.

16 The repo rate is the rate at which the RBI lends overnight funds to banks against government securities.

This lending happens under the RBI's Liquidity Adjustment Facility, known as the LAF.

17 Raising the repo rate makes borrowing costlier and helps cool inflation.

Cutting the repo rate instead makes credit cheaper and stimulates economic activity.

18 The Standing Deposit Facility (SDF) rate forms the floor of the RBI's policy rate corridor.

Banks use the SDF window to park surplus funds with the RBI overnight.

19 The Marginal Standing Facility (MSF) rate forms the ceiling of the policy rate corridor.

Banks use the MSF window to borrow emergency overnight funds from the RBI.

20 External Benchmark Linked Lending Rates (EBLR) link floating retail loans directly to the repo rate.

EBLR was introduced to speed up how repo rate changes pass through to home, auto and MSME borrowers.
