20 One-Liners to Remember

Quick-fire facts for last-minute revision.

- 1 GDP measures the money value of all final goods and services produced within a country's domestic territory in a year.**

GDP counts only domestic output; it excludes net factor income earned abroad, which GNP adds in.

- 2 GNP equals GDP plus net factor income from abroad (NFIA).**

NFIA is the income residents earn abroad minus income foreigners earn domestically.

- 3 Net Domestic Product (NDP) equals GDP minus depreciation, i.e., consumption of fixed capital.**

NDP adjusts GDP for the wear and tear of capital assets used in production during the year.

- 4 Per Capita Income is national income divided by a country's total population.**

It gives the average income of a resident and is a common measure of living standards.

- 5 Say's Law, a classic CAIIB ABM economics term, states that supply creates its own demand.**

It is a foundational classical economics proposition frequently quoted in exam definitions.

6 Gresham's Law holds that bad money drives good money out of circulation if not limited in quantity.

People hoard sound currency and spend debased currency, pushing good money out of circulation.

7 Engel's Law states that as income rises, the proportion of income spent on food falls.

Formulated by Ernst Engel, it links rising income to a shrinking food-expenditure share.

8 Okun's Law links GDP growth to unemployment: a 2.5% rise in real GDP above trend cuts unemployment by about 1%.

It quantifies the trade-off between output growth and the unemployment rate.

9 The Phillips Curve shows an inverse relationship between inflation and unemployment.

It implies that policies cutting unemployment can push inflation higher, and vice versa.

10 The Laffer Curve shows the relationship between the tax rate and total tax revenue collected.

It illustrates that revenue can fall if tax rates rise too high, discouraging economic activity.

11 Giffen goods defy the law of demand: their quantity demanded rises as their price rises.

The income effect of the price change outweighs the substitution effect for these goods.

-
- 12 Fiscal Deficit is the gap between government spending and its revenue plus non-debt capital receipts.**

It equals the government's total borrowing requirement for the year.

- 13 Primary Deficit equals Fiscal Deficit minus interest payments on past government borrowings.**

It shows the deficit excluding the burden of servicing existing debt.

- 14 Disinflation means a slower rate of price rise, not an actual fall in prices.**

Prices are still rising in disinflation, just at a reduced pace compared to before.

- 15 Deflation is a sustained fall in the general price level, the reverse of inflation.**

It typically occurs when output grows faster than the money supply in circulation.

- 16 Direct taxes, like income tax, cannot be shifted, while indirect taxes, like fuel tax, are passed on via prices.**

The burden of a direct tax stays with the person taxed; indirect tax burden passes to buyers.

- 17 Tax avoidance is a legal way to reduce tax liability; tax evasion is an illegal way to escape tax.**

IIBF exams frequently test this exact legal-versus-illegal distinction.

18 The Lorenz Curve graphs the degree of income or wealth inequality within a distribution.

The further it bows away from the diagonal line of perfect equality, the greater the inequality.

19 PPP (Purchasing Power Parity) is the exchange rate equating the price of an identical basket of goods across countries.

It compares the real purchasing power of currencies rather than just their market exchange rate.

20 Monetary policy is the central bank's use of money supply and interest rate tools to control inflation and stabilise the currency.

In India, this function is exercised by the Reserve Bank of India.
