20 One-Liners to Remember

Quick-fire facts for last-minute revision.

- 1 CAIIB is conducted by IIBF, generally held twice a year in June and December.**

Always confirm exact exam dates on the latest official IIBF notification.

- 2 Bank Financial Management (BFM) is one of the four compulsory papers in CAIIB.**

CAIIB has five subjects total: four compulsory papers plus one elective.

- 3 CAIIB BFM has four modules: International Banking, Risk Management, Treasury Management, and Balance Sheet Management.**

Each module covers a distinct area of bank financial management and is split into several units.

- 4 Module A of CAIIB BFM covers International Banking, including forex, exchange rates, and the dealing room.**

It is the module most closely tied to forex operations and risk concepts.

- 5 Simple or Direct Arbitrage in forex is a transaction conducted between only two centres.**

It is the most basic form of arbitrage, profiting from a price gap between two markets.

6 Compound or Three-Point Arbitrage involves additional centres beyond the original two.

Adding more centres to a direct arbitrage deal turns it into compound arbitrage.

7 A bank's forex function is split into three pillars: Forex Dealer, Back Office, and Mid Office.

The separation builds checks and balances into the bank's forex operations.

8 The Back Office processes forex deals, handles accounts, and keeps a check over dealers.

It provides operational support and reconciliation behind the front-office dealing desk.

9 The Mid Office independently monitors risk management and compliance in forex dealing.

It parameterises risks and checks that guidelines are being followed.

10 A forex dealer tracks two positions at all times: the Funds Position and the Currency Position.

Funds Position reflects cash inflow and outflow; Currency Position reflects net currency holdings.

11 Forex dealing operations carry eleven distinct types of risk, from operational to sovereign risk.

Examiners frequently test one-line definitions of these risks in the CAIIB BFM paper.

12 Pre-settlement risk arises when a counterparty defaults before a forex contract's maturity.

The other party is then forced to cover the deal at prevailing market rates.

13 Settlement risk arises when a counterparty fails during settlement, often from time-zone gaps.

Time-zone differences between the two currencies involved can cause settlement failures.

14 FEMA 1999, the Foreign Exchange Management Act, governs forex transactions in India.

It sets rules for persons, corporates, and others dealing in foreign currency.

15 FEDAI, the Foreign Exchange Dealers Association of India, was established in 1958.

FEDAI prescribes guidelines and rules for India's forex market operations.

16 In 2005, the RBI re-categorised Authorised Dealers into Category I, II, and III.

Category I covers banks and FIs; Category II and III cover money changers.

17 A Full-Fledged Money Changer (FFMC) can both buy and sell foreign currency notes and coins.

FFMCs are also authorised to deal in Travellers Cheques.

18 **A Restricted Money Changer (RMC) is authorised only to buy foreign currency.**

Unlike an FFMC, an RMC cannot sell foreign currency to customers.

19 **Export bills are crystallised into a rupee liability at the TT selling rate.**

Crystallisation generally happens on the 30th day but cannot exceed 60 days.

20 **An unpicked matured forward contract is automatically cancelled on the 7th working day.**

Cancellation happens at the bank's opposite TT rate after the maturity date passes.
