20 One-Liners to Remember

Quick-fire facts for last-minute revision.

- 1 CAIIB ABM combines economic analysis, statistics, HRM and credit management in a single objective paper.**

ABM is one of the compulsory CAIIB papers and is tested through multiple-choice questions covering these varied areas.

- 2 Module A of CAIIB ABM covers Economic Analysis, Statistics and Business Mathematics.**

This module forms the quantitative core of the paper, testing numerical and conceptual skills.

- 3 Module B of CAIIB ABM covers Human Resource Management topics like motivation and performance.**

HRM is largely theory-based and is considered a scoring module for CAIIB ABM candidates.

- 4 Module C of CAIIB ABM covers Credit Management, including appraisal, working capital and term loans.**

This module tests both conceptual understanding and numerical credit appraisal skills.

- 5 IRAC norms classify bank loan assets as standard, sub-standard, doubtful or loss assets.**

IRAC stands for Income Recognition and Asset Classification, a framework used for asset quality assessment.

6 SMA, or Special Mention Account, flags early signs of stress in a loan account before it turns NPA.

SMA categories act as an early-warning system so banks can act before an account becomes non-performing.

7 Gap analysis in Asset-Liability Management measures the mismatch between repricing assets and liabilities.

It helps banks estimate how interest rate changes will affect their net interest income.

8 A positive interest-rate-sensitivity gap means more assets than liabilities reprice within a given period.

In this situation, rising interest rates generally tend to improve net interest margin, and falling rates tend to reduce it.

9 Net Interest Margin (NIM) reflects the difference between interest income and interest expense relative to earning assets.

NIM is a key profitability measure that ALM concepts like gap and duration analysis help explain.

10 Maslow's hierarchy of needs is a foundational motivation theory studied in CAIIB ABM's HRM module.

It arranges human needs from basic physiological needs up to self-actualisation.

11 Herzberg's two-factor theory separates hygiene factors from motivators in workplace motivation.

Hygiene factors prevent dissatisfaction while motivators drive genuine job satisfaction, per Herzberg's model.

-
- 12 Theory X and Theory Y describe two contrasting management assumptions about employee attitudes to work.**

Theory X assumes employees avoid responsibility while Theory Y assumes they are self-motivated, a classic HRM concept.

-
- 13 DSCR, or Debt Service Coverage Ratio, is used to assess a borrower's ability to repay term loan instalments.**

A higher DSCR generally indicates stronger capacity to service debt from operating cash flows.

-
- 14 MCLR is the Marginal Cost of Funds based Lending Rate framework used by Indian banks to price loans.**

MCLR was introduced to make bank lending rates more responsive to changes in the cost of funds.

-
- 15 External benchmark-linked lending rates have shifted Indian bank loan pricing away from the older base-rate system.**

Regulators pushed banks toward transparent, benchmark-linked pricing for better rate transmission.

-
- 16 Standard deviation measures how spread out a set of data values is around its mean.**

It is a core statistics concept tested in CAIIB ABM's quantitative Module A.

17 Correlation measures the strength and direction of a linear relationship between two variables.

It is a statistical tool used in ABM to describe association, not necessarily causation, between variables.

18 The SARFAESI Act lets banks enforce security interest on defaulted secured loans without court intervention in eligible cases.

It gives secured creditors a faster route to recover dues by seizing and selling secured assets.

19 The Insolvency and Bankruptcy Code (IBC) provides a time-bound process for resolving stressed corporate borrowers.

IBC aims to resolve insolvency cases within defined timelines to protect asset value.

20 Working capital assessment evaluates how much short-term financing a borrower's operating cycle needs.

It is a core Module C skill combining ratio analysis, fund flow and cash flow interpretation.
